Standing Data Management

Reduce operational exceptions,
increase billing accuracy and create
more predictability.

As a market participant in the Australian utilities sector, you know that some of your most critical business processes are centred around access to accurate standing data.

Market snapshots from AEMO enable you to bring your standing data back into alignment, but only twice a year. If your business aspires to a highly efficient day-to-day level of operation, this simply won't do.

Our Standing Data Management solution provides continuous and market-current updates, upon which you can rely for day-to-day processes.

Reconcile your standing data with market changes daily.

Our Standing Data Management brings a robust solution to the challenges and business impacts caused by conflicting standing data associated with a market identifier.

With streamlined access to core market system data resources, Standing Data Management compares your current standing data repository with market standing data and identifies all inconsistent data values.

It then corrects standing data by updating your repositories and associated applications. You can easily bring your standing data corrections together by reconciling the conflicts across your repositories and associated applications. Standing Data Management also provides ongoing data accuracy checks by automating regular comparisons between the market and your repositories

Benefits of a Brave solution

Significantly reduce operating costs

How many hours of employee time are wasted on standing data errors? With data reconciled for you, you can reallocate resources to value-add activities.

Increase billing accuracy and revenue certainty

When you're confident in your data you can be confident in your billing function. Fewer complaints, less exception management, and far more accurate forecasting.

Predictability for confident decision-making

There are times you need to take decisive action. With up-to-date accurate data, you can make bold decisions with confidence.

Ease compliance pressure

Data errors often compound, leading to compliance and regulatory risk. Get the numbers right and you'll spend less time fighting fires and covering your back.

How it works

With API capability and ring-fenced security, Standing Data Management offers an intuitive, compliant and user-friendly platform. Access, manage and maintain accurate organisational and role specific standing data within one application.

1. Connect

Connects your standing data with market standing data.

2. Reconcile

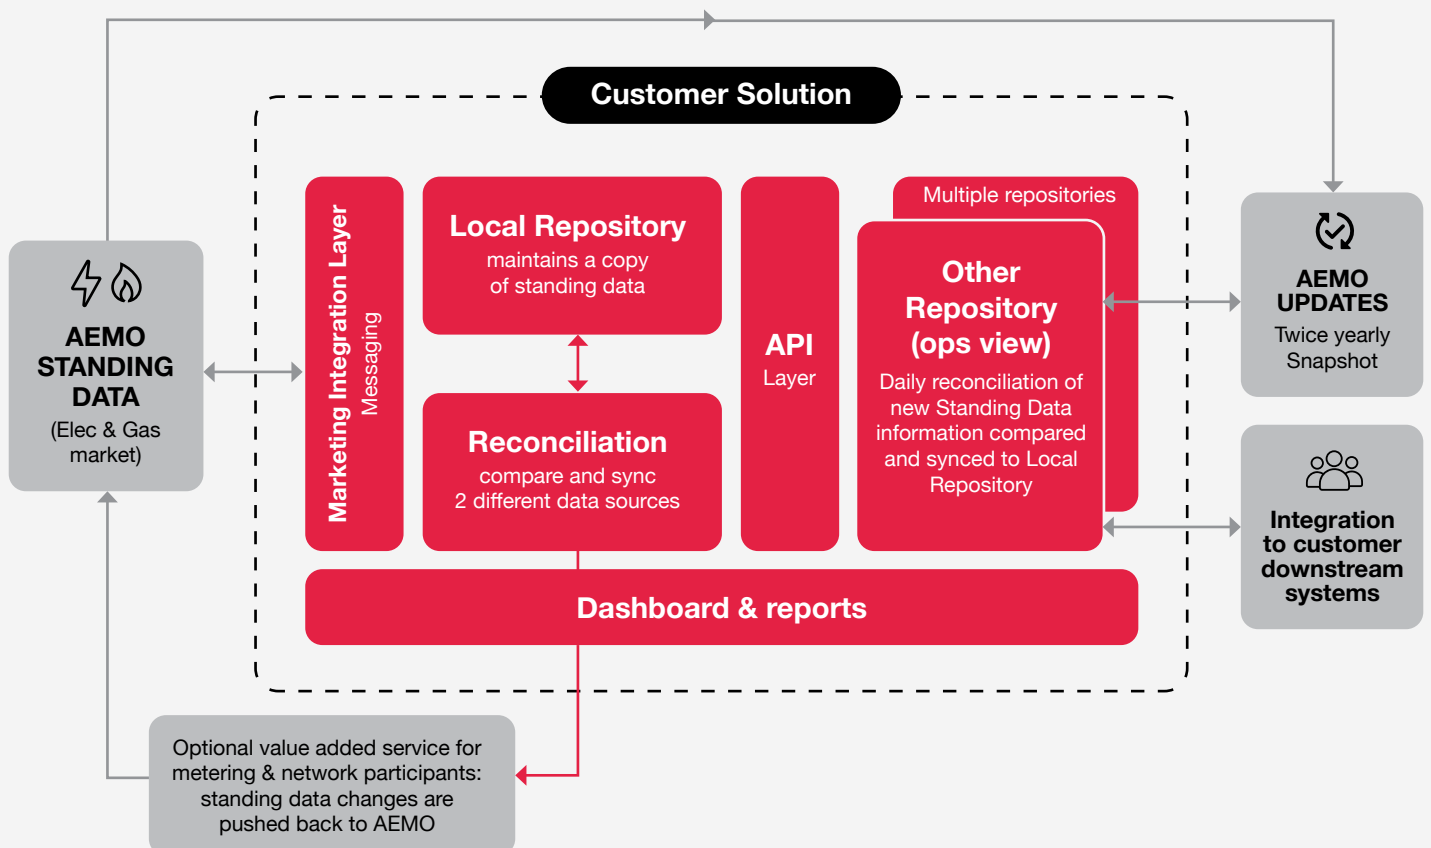

Compares and identifies conflicting standing data. Choose a date range or 'single point of time' comparison for your data analysis.

3. Resolve

Our software corrects standing data, updating the stored data and associated applications.

4. Store

Stores and maintains a repository of accurate standing data or you can view a summary of data discrepancies and take appropriate action before saving changes to the database.

Why Brave

Australian-born, local expertise

We proudly specialise in creating solutions for the Australian Energy Market.

We're proud energy experts

Our team comes from the energy industry and we bring a wealth of knowledge which we apply to our solutions.

The only partner you'll need

Our solutions span all segments of the Australian energy market. Simplify your IT stack and user experience by consolidating your software needs into one place.

One team, one dream

We're local, have deep industry knowledge, and love working closely with our clients. Our commitment goes beyond just software - we pride ourselves on being a part of your business to grow and succeed together.
